

Job Description

Senior Front-End Engineer

Department: Engineering

Type: Full-time

Location: Amsterdam or remote

Hours: 32-40 hours per week

Reports to: Head of Engineering

Salary: Competitive plus bonus and stock

Posted: March 2021

Our Core Values

Achieve anything with a healthy and happy team

Push boundaries through direct communication and diversity

Act responsibly and protect the data

Amaze through user-friendly and rewarding experiences

Maximize research impact

About the role

At Castor, we're all committed to a world with faster, smarter, medical research. Our cloud based software solutions are revolutionizing data capture for academic and commercial researchers worldwide. You've found yourself a company with a true purpose.

Our Engineering team is contributing to improving the world of medical research. We are striving to grow eClinical applications with the best possible UI and UX on a modern, easy to work with, technical stack.

In this role, you will own and grow our React Front-End engineering, moving from our legacy application further towards a well-structured, tested, and accessible experience.

What you'll be doing

- Owning and growing our React Front End engineering, moving from a legacy application towards a well-structured, tested, and accessible experience;
- Mastering your craft, both by mentoring in our Frontend Guild and setting standards through your daily work on features and improvements;
- Furthering efforts towards the automated unit, functional, and acceptance tests;
- Supporting QA team with the infrastructure that allows to create end-to-end tests with Javascript;
- Collaborating closely with our Design System team to integrate existing components into our application(s) and add new capabilities to this system;

What you'll bring

You'll definitely have:

- Solid experience using React.js framework;
- Fluent and practiced experience keeping HTML and CSS maintainable and adaptable in large projects, while preserving semantic meaning and accessibility;
- An ability to put yourself into the customer's shoes when thinking about how our product is used.
- Fluent verbal and written communication skills in English;
- Enthusiasm and ability to balance business and user needs and collaborate with your product and engineering team members.

It would be good if you had:

- Experience with TypeScript;
- Foundational knowledge about web technologies, such as backend programming languages and tools, web-related protocols, and a general understanding of how the internet works;
- A healthy interest in science, medicine, and healthcare.
