Product Owner

Department: Product

Type: Permanent

Location: Amsterdam

Hours: 36 - 40 hours per week

Reports to: Head of Product and Design

Salary: Competitive + bonus and stock

Posted: September 2020

Our Core Values

Achieve anything with a healthy and happy team

Push boundaries through direct communication and diversity

Act responsibly and protect the data

Amaze through user-friendly and rewarding experiences

Maximize research impact

About the role

At Castor, we're all committed to a world with faster, smarter, medical research. Our cloud based software solutions are revolutionizing data capture for academic and commercial researchers worldwide. BOOM! You've found yourself a company with a true purpose.

Our Product and Design team are the creative and functional experts behind the features and functional development of our eclinical software. As we move into our next investment of a \$12million Series A, we're on the lookout for a Product Owner to join the team.

In this role, you'll be hands-on in product ownership and development. Bringing knowledge of working with complex SaaS products, you'll use your agile approach to collaborate across the business in the development of our eClinical products, ensuring we continue to maximize the potential of clinical researchers worldwide.

What you'll be doing

- Develop Castor's eClinical products including EDC and ePRO as part of cross-functional teams
- Ensuring our Engineering team is efficiently delivering on the product roadmap while ensuring a great UX
- Lead requirements gathering efforts, creating user stories that fulfil the product vision and goals
- Work with our Customer Success team to truly understand and support us in solving the needs of our customers
- Collaborate proactively with research, design, QA and engineering teams throughout the product development process

What you'll bring

You'll definitely have:

- Hands-on technical or software product ownership experience
- Experience working with complex software products
- An understanding of customer success and how to translate pain points and success factors into product requirements
- Experience of collaborating with Engineering teams
- Experience of collaborating and working with agile software development
- A self-starter mentality, with the ability to thrive in a dynamic startup environment
- A hands on attitude with a willingness to get the job done
- An analytical mind with strong attention to detail
- An alignment to Castor and ability to enrich our core values
- The natural ability to communicate complex ideas

It would be good if you had:

- Experience and knowledge of product development in the life sciences sector
